

First True Trifocal Cataract Implant Is Finally Here!

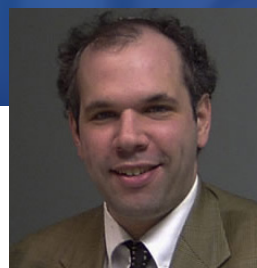

Mandes Kates, Ph.D.,
MD., F.A.C.S.

Mark Stamm, M.D.

Leslie Green, M.D.

Yochanan Burnstein, M.D.

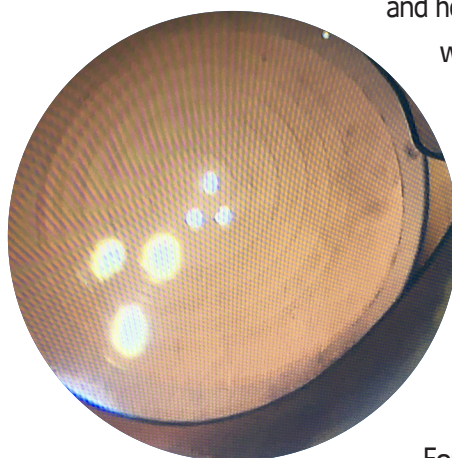

Irina Koreen, M.D., Ph.D.

The Premium PanOptix and Premium PanOptix Toric IOLs are the first FDA approved Trifocal IOLs available in the U.S.

Eye Physicians of Orange County PC are the first surgeons in Orange County to implant The PanOptix and PanOptix Toric IOLs.

Patients can now achieve near, intermediate and distance with ONE LENS. With its patented Enlighten technology, PanOptix is able to provide great intermediate vision without compromising quality near and distance vision. Patients can now read, use the computer, see their dashboard, and perform various other near and intermediate activities along with great distance vision. In the U.S. clinical survey of bilateral implanted

PanOptix patients after 6 months, over 99% said they would have the same lens implanted again! Let our practice show you the latest in IOL technology, and how it can deliver a full range of vision without compromise.

An intraocular lens implant (IOL) is an artificial replacement for the lens of your eye which is performed with cataract surgery. An IOL is made of clear plastic, and it's about a third size of a dime.
